What Is Resume Play & Why Do You Need?

Benefits of Resume Playback

Resume Play, Resume Playback, or Resume Player feature as it may be interchangeably called is a simple yet powerful video player feature that automatically monitors and stores a viewer's session data when they leave the video before finishing.

And leverages this data to continue playing the video from where they left off whenever they return.

In practical layman's terms.

Suppose you have a video that is 1 hour 25 minutes long (01:25:00), and a viewer watching the video left/closed it at 12 minutes 13 seconds into the video (00:12:13). Whenever they return to that video, we'll automatically continue the video at 00:12:13 for the viewer.

No timeline scrubbing is required

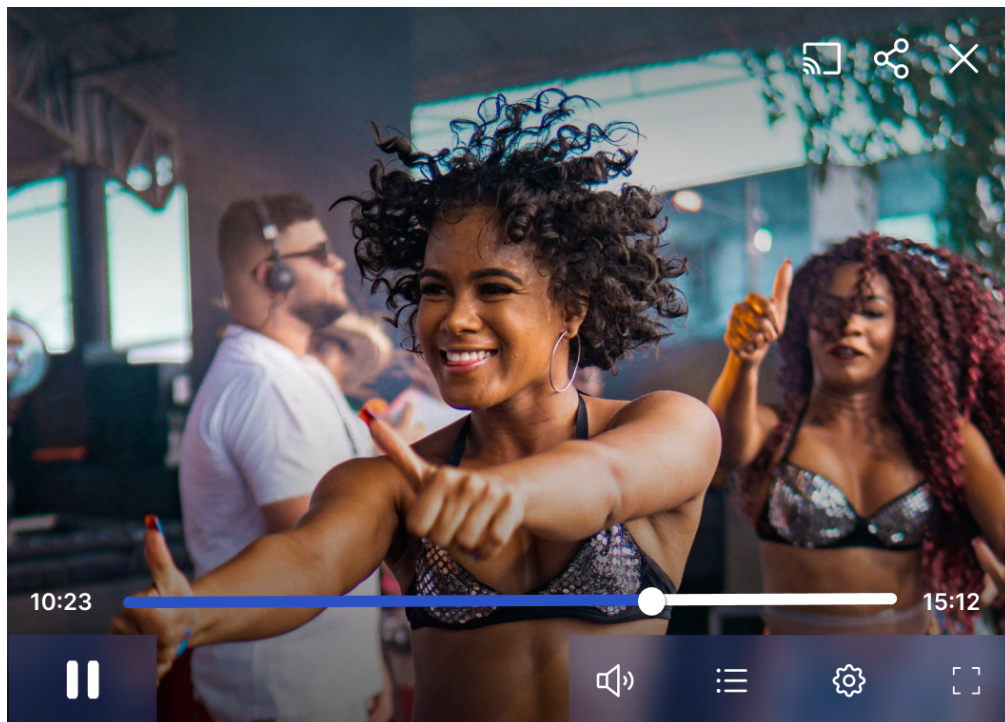

Timeline scrubbing or Playbar seeking is very stressful, especially for long videos on mobile phones with smaller screens, this can be frustrating for viewers.

This is one of the key advantages of the Resume Play feature, once enabled... we'll continue the video automatically and your audience can just sit back and enjoy their content.

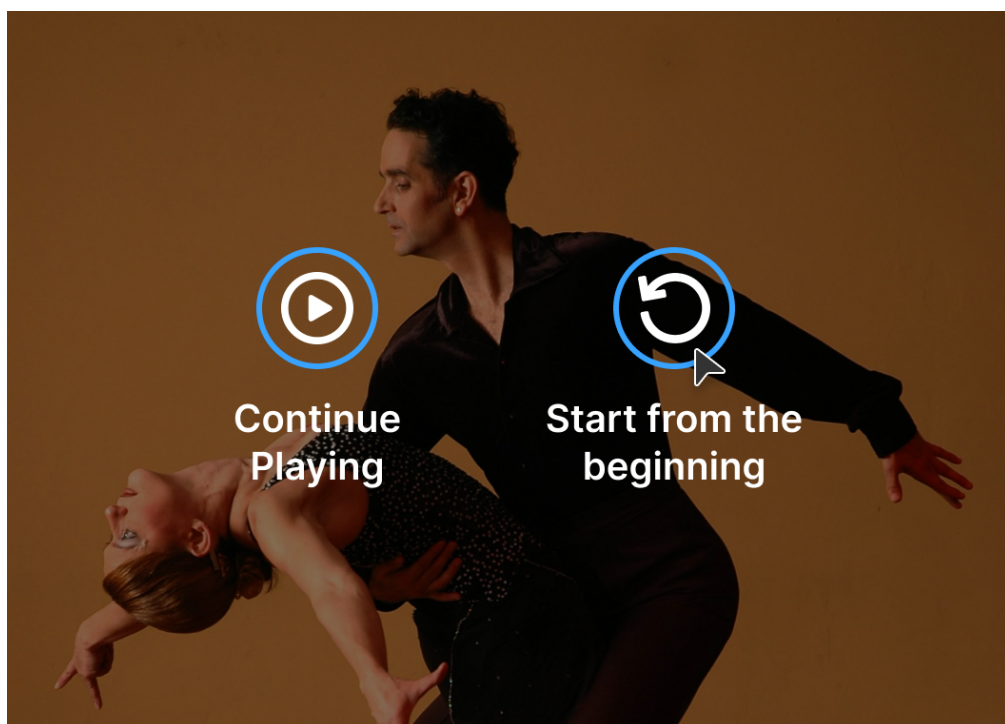

Resume Play Your Way

We have 2 styles of resume play for your audience's pleasure.

Auto Resume

If you enable this style, we'll continue the video for the viewer automatically without requiring any action (subtle).

Viewer's Choice

If you enable this style, we'll show a prompt with 2 choices to viewer asking them to continue watching or restart their video.

Resume Play is perfect for:

Movies & TV shows

Religious preaching

Documentaries

Video lessons & E-learning

Video Podcasts

Sports streaming

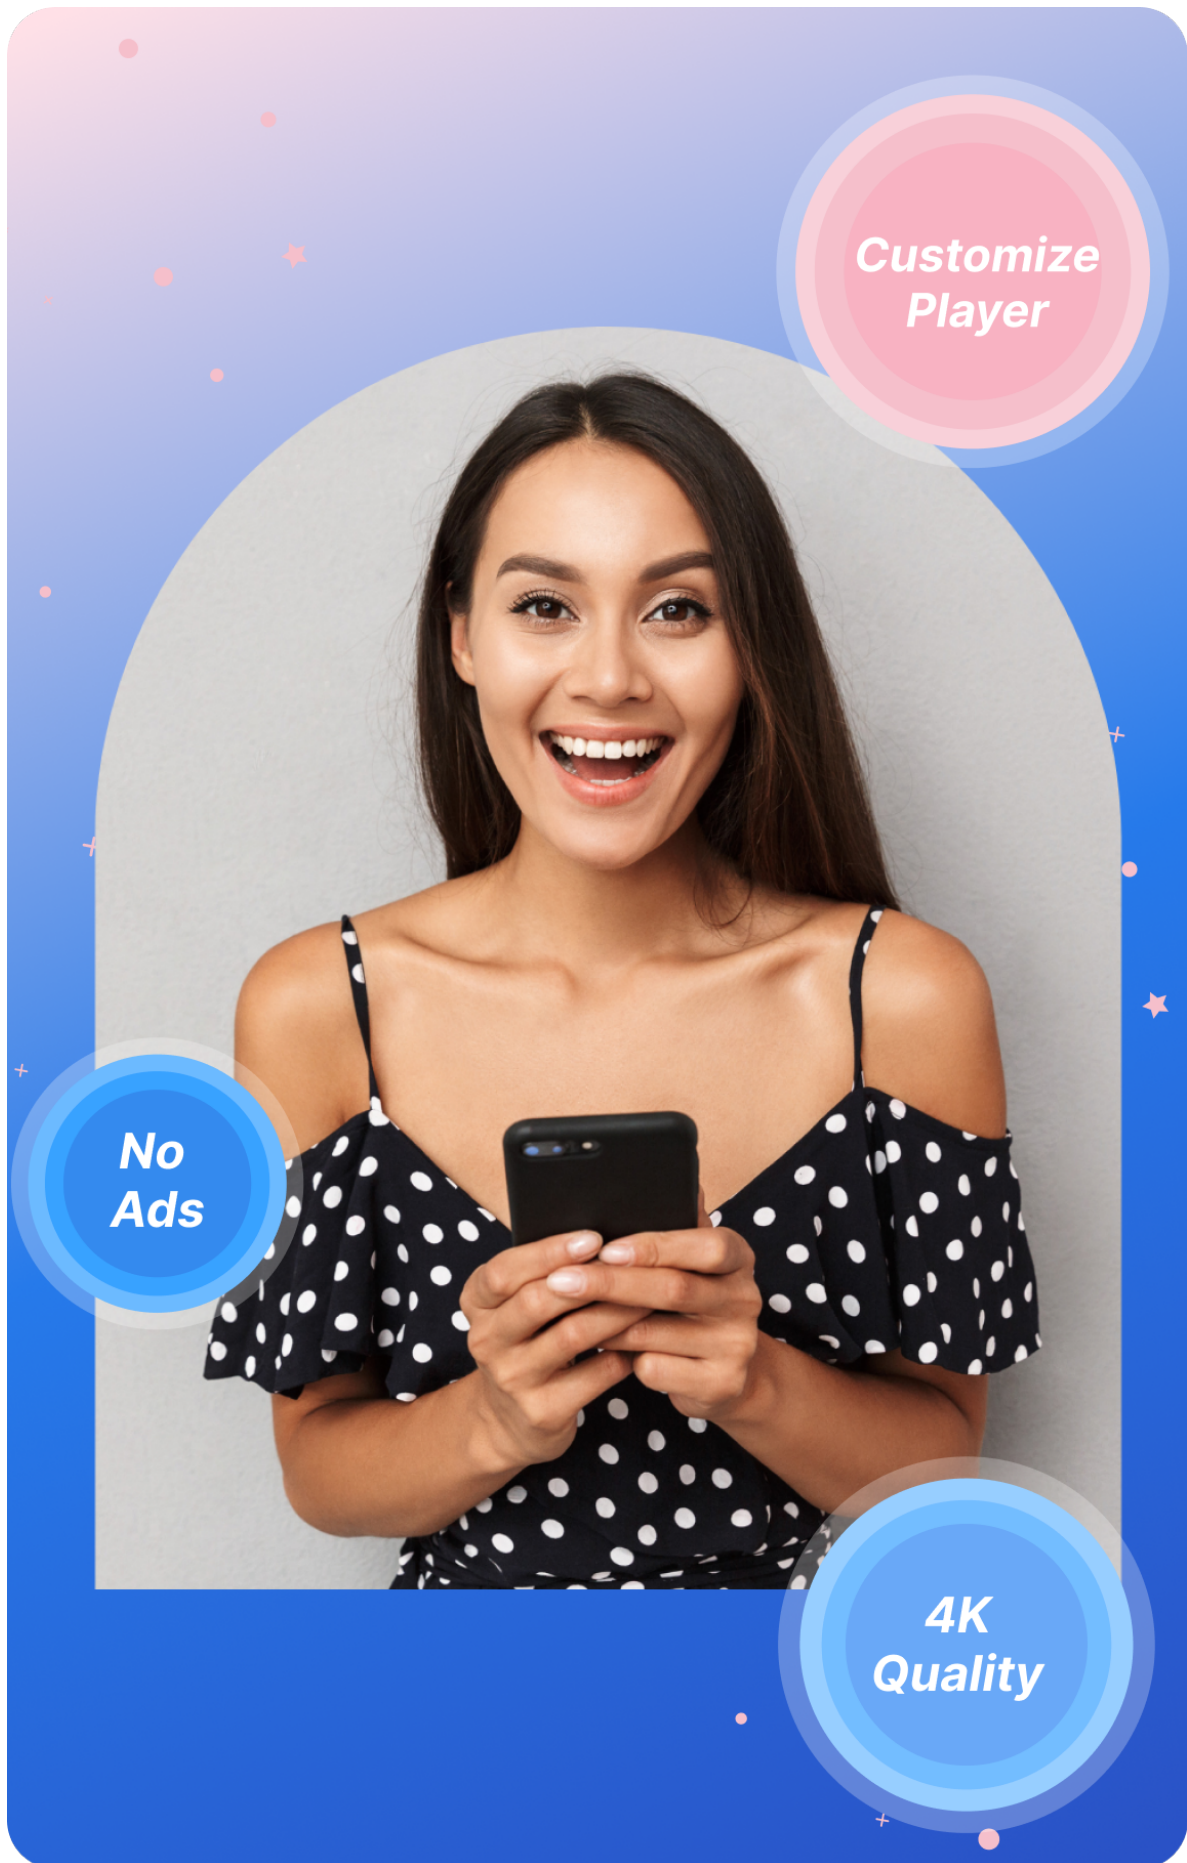

Interviews & keynote speeches

Corporate training videos
